lab6

Issue 7

Special content-free issue

In this issue…

Nothing

Since there is too much content on the internet already, this special issue of Lab6 is empty.

You wouldn't have had time to read it anyway.

Seriously, look at all that stuff out there. Did you see this new series on Netflix? Of course you didn't. It was brilliant, but there were 400 even better shows on. Have you watched all movies yet? Well, what are you waiting for? You want to talk podcasts? Only four million episodes to catch up on. Here's a cool dude. He's spent four thousand hours playing a video game. It's OK, they don't run out!

Maybe check out this nine-hour long YouTube video that meticulously deconstructs every cultural reference in the latest superhero movie. Did I say YouTube video and superhero movie? I meant undergraduate lecture and James Joyce. Top 5 times Leopold was iconic. Or if you prefer, you could just watch six thousand tonnes of cobblestones being unloaded from a bulk carrier – in real-time. Watch until the end. You won't believe what happens to the five thousandth tonne!

Get ready to do some serious homework, because surprise! We now speak in hieroglyphic metaphors carved out of memes from content you've never heard of, but thirty million people have, but you've never met any of them. Are you so out of touch? No, it's the children who are wrong. Haha, get it? Not for long. Skibidi!

It's not like the content cup runneth over just with bad, mindless stuff. Here's 10,000 great works of literature, each one more profound and erudite than the last. Here's that bulk carrier again, this time packed with priceless works of art by history's wisest geniuses. Probably comes to about six thousand tonnes. You'll never have time to *see* half of them, let alone appreciate them.

Frankly, another issue of Lab6 is the *last* thing you need.

Enjoy this brief respite and join us next time for a PDF file that's also, like, a Transport Tycoon saved game or something.

Longitudinal Storytime...

time

Tombstone of the Druid v0.8.1 Changelog

- NO CHANGES WHATSOEVER: Version bumped to ensure progress is being made

- BUG-FOR-BUG COMPATIBLE WITH PREVIOUS RELEASE.

- SUPPORT: This release begins the deprecation cycle for version 0.8.0.

gemini://lab6.com/7or here.
```

Full names and email addresses will not be published, unless requested.

Known Defects

Sorry, Firefox for Android users will have to avoid using spaces.

Issue 6

2024-01-27 11:43:59 I'm happy the work is ongoing, I was worried for a moment you're running out of ideas. Does this comment system support wild character? Łykną über ↔≠¬ how do I paste breakline character in URL? Is there a keyboard shortcut on Linux? Oh wait there is

↳**Lab 6 Official Response:** We ran out of ideas *years* ago. We're *way* beyond ideas now.

2024-01-27 11:45:10 It's also a Firefox shortcut, it seems. Are you secured against code injection? – Ponda

↳**Lab 6 Official Response:** Nobody's made it very far into the CTF challenge in Issue 0 yet, so the threat model remains fair to moderate.

2024-01-28 03:53:22 bro this shit is WACK and awesome, can't wait to see the next issue :)

2024-02-01 10:13:34 This is awesome on so many levels

2024-02-01 13:08:35 This is a really cool project!

2024-02-01 14:12:09 Hello there! nice pdf

2024-02-01 15:58:03 This was some of the most fun i had reading anything online in the last few years, thank you

2024-02-01 18:49:01 Every now and then someone, somewhere, reminds me I'm not truly alone.

2024-02-02 00:29:22 what

2024-02-04 05:29:29 Great read, sending from Lagrange on Android to test space escape. so happy with the progress you've made on csvs and social justice

↳**Lab 6 Official Response:** Yes!! Gemini readers exist!

2024-02-10 21:39:30 test test

2024-02-10 21:43:07 I'm sure Android Firefox users can simply type %20 manually instead of a space... would be rather irritating however

↳**Lab 6 Official Response:** They made their choice.

2024-04-13 15:08 The world demands an update! What ever happened to the air freshener mutated pen box? A stranger, curious after twenty-one years.

↳**Lab 6 Official Response:** As far as I know, it's in a landfill in South America. I never did figure out what was going on. Possibly the top layer of the plastic box got extremely hot sitting in the sun, and the slight weight of the air freshener was enough to cause it to sink down slightly into the softened mass.

2024-06-26 16:10:34 this seems like bullshit but would be wild if it works

2024-06-26 16:10:49 man this comment thing is cool as hell! -Luke

2024-08-28 21:36:04 Fascinating

2024-08-28 21:37:15 Fascinating

2024-11-04 14:29:46 Your sense of humor is too good Ramanujan would come back to honor you

↳**Lab 6 Official Response:** I swear, these guys aren't paid or anything. Anyway, gotta go. Taxi!

2024-11-25 17:46:17 Amazing, very glad to have discovered this! Love!!!

The Small Print

All content is licensed under

Actually, the Transport Tycoon save format has a few variants. There's the original and deluxe versions, which allow 41 and 49 bytes respectively for the title, including a two-byte checksum. Then there is the modern OpenTTD format, which is tag-based like a PNG, and, catastrophically for our purposes, contains a fixed value at offset zero. So, original version it is.
